Vital-Water Bioresonance-Converter

Water, the elixir of life, is sensitive

Is water just chemistry?

Chemically, water is a molecule in which a single oxygen atom is linked to two hydrogen atoms. Moreover, water is the only chemical compound on earth which can be naturally found as a liquid, as a solid and as gas.

Water and drinking water

But water is much more - it is life on earth. Water is the basic requirement for all life. In addition, it is probably the largest carrier of information on earth. Water learns all the time. Each drop of water contains perhaps the entire history of how the earth developed? Fresh spring water is vital and rich in energy and has a particularly mild taste. It is levitated, purified and healthy water.

The earth's surface, or also the „blue planet“, consists of approx. 71% water. Despite the large amount of water on earth, only a small part of it is drinking water. This part is increasingly subjected to considerable loads. Water loses many of its positive properties due to environmental influences, contamination or disinfection. More and more substances such as pesticides, nitrates, hormones and many pharmaceutical substances are entering our drinking water in high concentrations. When drinking water is treated, various treatment processes and chemical substances are also used to disinfect the water and remove unwanted substances.

Our drinking water is, therefore, drinkable, but this water often does not offer power and vitality. Through water treatment, pressure in pipes, but also through mobile phones, radios or radio waves (electrosmog) etc., water loses its vitality and infects other water molecules (e.g. body water) with negative information.

The solution:

Water serves as the largest carrier of information on earth. The source of life is the frequencies in which we live, which we emit and which we take in again!

The i-like bioresonance technology realigns the information in water. Water molecules become de-clustered and new, well-flowing information (Gu-Qi = food energy) is created. The result is very harmonious „informed“ water.

The aim is to provide people and those around them (family, pets, plants, etc.) with living, energetic water in their own homes and for every source of water within them.

If you think about the fact that humans consist of about 70% water and water, as our body's main element, takes over many vital functions, „well-informed“ water is a prerequisite for your vitality and health.

You can do just that with the Vital-Water Bioresonance-Converter!

The i-like Vital-Water Bioresonance-Converter vitalises flowing water in large and small buildings, swimming pools, wellness facilities and the like.

„Healing spring water“ at home! Is that possible?

The i-like Vital-Water Bioresonance-Converter is charged with frequencies from the following healing springs:

- Lourdes, France
- Lake Sinakara, Peru
- Altai, Siberia
- Pasir Putih, Malaysia
- Tuwa, Siberia
- Scuol, Switzerland
- Einsiedeln, Switzerland
- Bad Ramsach, Switzerland
- Mariastein, Switzerland
- Rheinfelden, Switzerland
- Leukerbad, Switzerland
- Klosters-Serneus, Switzerland

Certified water quality

The Vital-Water Bioresonance-Converter was awarded by the laboratory Hado Life (Dr Emoto/Dipl.Ing. Gaupp-Berghausen) for its excellent water quality.

Test and measurements

Example: Osmosis water was activated with i-like's Vital-Water Bioresonance-Converter. The result clearly shows the importance of information in water.

Before being applied,
without converter.

After being applied,
with converter.

Even if the two images on the right and left show absolutely identical substances (H_2O) from a chemical point of view, the change in information with the Vital-Water Bioresonance-Converter is clearly visible. The measurement by the Hado Life laboratory shows what positive frequency changes can be achieved with the converter.

Dipl.Ing. Rasmus Gaupp-Berghausen, owner of Hado Life laboratory:

„About 2500 years ago, science as a whole actually drifted into measuring quantity - everything was only determined by numbers. If you're testing water today, you're testing everything but water itself. Tests include how much nitrate and how much nitrite is in it, maybe the pH-value and all the pollutants. But the water itself is not examined. You have to imagine it the way it is with humans, when you examine a person and say: you have so much calcium and so much protein. That would no way nearly describe the person, but would represent only a sum of loose elements. And that's exactly what many people do with water today.“

How does the water-crystal examination according to Dr Masaru Emoto work?

Water is, as it seems, more than just the sum of its ingredients. Water has the unique ability to react to any external influence.

Based on the dipole character of water (charge differences/poles within an H_2O molecule), billions of very interesting compounds are formed per second between the water molecules.

The Hado Life water laboratory has been testing water for its shaping properties for many years.

It is interesting to note that water, no matter what information it is exposed to (e.g. physical or electromagnetic), forms shapes, be it on a macroscopic level, e.g. a wave, or microscopic.

In recent years, Hado Life has microscopically examined over 2000 water samples for their shaping properties. With the help of water ice crystal photography, it is possible to reflect the shaping properties of water.

Vital-Water Bioresonance-Converter

Does water equal H₂O?

Many chemicals - such as medicines, detergents or pesticides - are used in our everyday lives. Some of the residues of these substances enter the aquatic environment after application as micropollutants in part. Here they can have a negative impact on water clusters and pollute drinking water resources. In order to remove such residues, wastewater treatment plants and various filter methods are used. There's hardly anything to complain about that, but that's far from enough!

What does a conventional water filter do?

Unwanted substances and pollutants in water can partly be removed using filter systems. Here, the heavy parts (substances) are filtered out of water. The information on pollutants itself, however, remains stored in the matrix of the water (water cluster). The main problem of polluted water is the harmful information. In addition, pollutants bind more easily with clustered water. This means that toxin information, as well as toxins themselves, are increasingly absorbed by humans in harmful quantities when water is filled with negative information.

What does the Vital-Water Bioresonance-Converter do?

The i-like water converters are charged with correction frequencies to revitalise water. In addition, flowing water is provided with 12 types of healing spring water information. In this way, water is newly informed, structured and revitalised (so-called „open clusters“).

It is freed from so-called bad information and the properties of water, in relation to humans and their well-being, are optimised. (See Hado Life Waterlaboratory Award)

The result is positively informed and well-structured water.

Installation - what to consider?

Classical filter systems can negatively influence the structure of a water molecule. If filter systems are present, always install the i-like converter after the filter in the flow of water.

Water is involved in 99% of all functions in the human body!

A sufficient daily water supply is the prerequisite for the proper course of all bodily functions. So if you drink enough water every day, you will keep your metabolism going, nurture your body and soul and thus positively support your own health.

The importance of water for human health is already evident from the fact that the human organism consists of about 70% water. About 2/3 of this water is inside the body cells; the remaining third is between the cells in the tissue and appears as blood fluid.

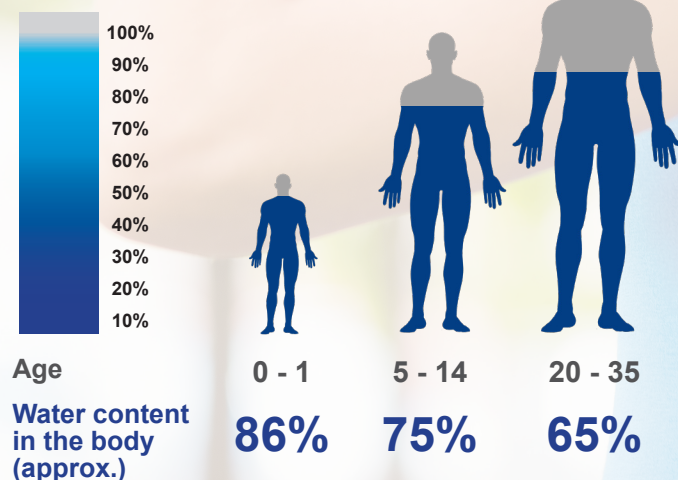

What does water do for you?

Water as an all-rounder helps with various physiological functions. Here are some examples:

- The body is mainly made up of water
- Water enables the body cells to grow, multiply and survive
- It helps to supply the body with oxygen
- It lubricates joints, minimising frictional damage
- It acts as a shock absorber for the brain and spinal cord
- It helps the body's own detoxification by eliminating toxins and waste
- Correct hydration helps your kidney and liver function to optimise fat metabolism.
- It forms saliva and transforms food into vital components (digestion)
- It improves excretion and nutrient absorption
- The brain needs water to produce hormones and neurotransmitters
- It keeps mucous membranes moist
- Water makes your skin look smooth, healthy and young

Humans consist of approx. 70% water

How much water is used where in the body?

It is well known that the human body contains a lot of water. But very few people know how much fluid is „hidden“ in the individual organs. Not only our blood and kidneys, but also our brain and even our bones need sufficient water. So how exactly is the fluid in the body divided and in which organs is the most water found?

Here is a brief overview:

Approx. **92%** **BLOOD**

Approx. **83%** **KIDNEYS**

Approx. **75%** **BRAIN**

Approx. **60%** **HEART**

Approx. **22%** **BONES**

Pilot project: Measurement on humans

In a pilot project, test persons were measured in order to assess the effect of vitalised water on bioenergetics. The project was carried out as follows:

- **The test persons** were between 22 - 58 years of age; Basically, they were healthy people
- **Water vitalisation:** 1 Vital-Water Bioresonance-Converter activates water before drinking
- **Measurement procedure:** Bioenergetic measurement (determination of bioresonance numbers). Initial measurement Monday, second final measurement Friday (4 days intensive use)
- **Application:** The subjects had to drink 2-3 litres of vitalised water daily and were not allowed to change anything else in their everyday life or habits

Evaluation of i-like water vitalisation: Average improvement of values in percent

Mean value differences (initial and final measurement): **The results do the talking!**

- Histogram (tissue homeostasis potential) +78%
- Autocorrelation (self-efficacy) +66%
- Central regulation +27%
- Centr. energy pyramid („target and HAVE“) +38%
- Psychoemotional resources +33%
- Brain harmonisation potential +36%
- General health index +36%

The investigations show that the information reaches its target as far as the readiness potential of the water is concerned, and is adopted. This readiness potential of drinking water is transmitted as so-called „open clusters“ in the body's water and is thus available for vitalisation and increased resilience.

Result: The activation of drinking water with the i-like converter significantly and measurably increased vitality and resilience of the test persons.

Summarising the effect of the Vital-Water Bioresonance-Converters

Although filter systems can remove pollutants from water, the negative pollutant information that massively influences the human organism remains stored in the water matrix (water cluster). Here, it is necessary to rid the water of this information. That's what i-like's Vital Water Bioresonance Converter does.

The solution: The i-like Vital-Water Bioresonance-Converter informs, structures and revitalises water (so-called „open clusters“), frees it from so-called bad information and optimises the properties of water in relation to humans and their well-being.

How would you like to have „your water“ in your body?

100% Humans consist of approx. 70% water

As negatively informed H₂O from the tap or water bottle?

Picture of water without converter.

Or positively informed, vital, energetic water?

Water crystal with the Vital-Water Bioresonance-Converter.

Using the Vital-Water Bioresonance-Converter

Each person consumes an average of 150 litres of water per day in a normal household (Swiss average: 142 l/E*d [1]). This guide value is the basis for calculating the required number of Vital-Water Bioresonance-Converters per household.

Family household

For a „normal“ single-family household, a Vital-Water Bioresonance-Converter should be installed in each household for 6 persons (in case of doubt, please always round up). The Vital-Water Bioresonance-Converter is installed directly at the central main water pipe (cold water connection - max. 50°C) of a detached house. If several converters are required (higher number of persons in the household), please place them behind or next to each other (not on top of each other) directly on the pipe.

Important: *If you have a filter system installed, place the converter after the filter in the flow of water.*

Flat

For a flat, a Vital-Water Bioresonance-Converter should be installed per 6 persons in the household (in case of doubt, please always round up). Here the converter is attached to the direct supply line (cold water connection - max. 50°C) of the flat. Due to its placement on the supply line, only the number of persons who obtain their water via this direct supply line must be taken into account. Normally, each flat has its own supply line. Your property manager will tell you which supply line is yours. If several converters are required (higher number of persons in the household), please place them behind or next to each other (not on top of each other) directly on the pipe.

Important: *If you have a filter system installed, place the converter after the filter in the flow of water.*

The Vital-Water Bioresonance-Converter „informs“ min. 1,000 litres of water and significantly more per day. Therefore, a converter in private households is usually sufficient for garden irrigation, washing, bathing, showering, etc. without any problems.

Trade, industry, office buildings, shopping centres, surgeries, bathing and wellness facilities, public authorities, etc. will be gladly given exact information by i-like consultants on how to install converters in order to obtain vital water throughout the entire building.

Water quality Certification for your company

Let your business, your wellness centre, your hotel, your facilities of all kinds, your clinic and practice, your shopping centre, your farm, etc. be distinguished by the Hado Life Emoto laboratory and the i-like Metaphysik.

After correct installation by an i-like consultant, you will receive this award, which you can then use and offer for your

advertising, your representative office, as well as your quality management. Treat yourself, your employees, your customers and patients.

The award will be given to all companies that have been registered and controlled by a qualified i-like consultant at i-like Metaphysik.

Zertifizierte Wasserqualität,

in diesem Haus durch die Installation des i-like Vital-Water Bioresonance-Converter, basierend auf den Erkenntnissen von Dr. Masaru Emoto. Die Arbeiten von Emoto aber auch vielen anderen Forschern zeigen heute auf, dass erkenntliche harmonische Strukturen im Wasser ein wichtiges Qualitätsmerkmal darstellen.

WELLNESS HOTEL & SPA

Dieses Dokument bestätigt, dass die Wasserkristalluntersuchungen des „i-like Vital-Water Bioresonance-Converter“ von Dipl.-Ing. R. G.-Berghausen im HadoLife Wasserlabor durchgeführt wurden und zur Qualitäts-Zertifizierung geführt haben. Somit ist dank der Installation dieses Wasseranschlusses mit dem i-like Converter das gesamte Fließwasser vitalisiert und es entsteht nach Emoto-Wasserkristalluntersuchung eine besonders hohe Schwingung, Blockadenauflösung und energetische Dichte im Wasser. R. G.-Berghausen war zu Lebzeiten von Dr. Masaru Emoto Gründungsmitglied des Hado-Life Zentrums und ist heute alleiniger Inhaber.
