Room-Converter to regulate e-smog

# Electro-smog

The danger of the digital revolution since the 1990s!

Electro-smog is an invisible danger that has been tested from many angles and interpreted differently. Industry relies on electromagnetic shields to reduce the thermal effect. Healthcare professionals, however, see just as much risk in the non-thermal effects, i.e. the impact of electromagnetic frequencies on the body's cells.

The latest laws require companies to protect their employees against e-smog.

## Problem identified, solutions found

For over 25 years, the technical development team at i-like Metaphysik has been researching, developing, and working on ways to correct non-thermal electromagnetic pollution and its direct influence on the human body. i-like Meta-Converters are a one-of-a-kind system for correcting the harmful influence of stray electric fields using destructive interference. Simply put, data packets are sent along with the electromagnetic wave to compensate for the adverse effects of stray fields (scalar = undirected waves).

## How does it work?

A simple analogy would be how two waves meet in water. If they meet on the smooth surface of a lake, there are two possible reactions: either they both meet at the same height and pile up twice as high (which is constructive interference, something we don't want with e-smog, of course!). Or one wave is at a high and the other is at a low when they meet. The result is neutral. This is called destructive interference.

This is a bit like what happens with the effect of bio-resonance on electro-smog. Electromagnetic waves can be neutralised and reversed to a bio-resonance function, where devices, broadcasters, and power lines that emit e-smog can be made to emit bio-resonant rays.

**Conclusion:** the i-like Room Converter lets you activate electro-smog into a bio-resonance frequency. The positive results are not just the neutralisation of sources of harmful electro-smog, but also the revitalizing for all people, animals, and even plants in area covered by the room converter.

The two vibrations neutralise  
one another and reverse the  
misinformation!

# Legislation

## Are there rules?

Since 18 November 2016, employers in the European Union have been required to protect their employees from e-smog. The law primarily pays attention to the thermal effects. Research agrees, however, that even fine electro-smog frequencies, especially in the high frequency range used with WiFi networks, digital telephony, mobiles, LED lights, etc. are also extremely harmful.

Lawmakers have yet to address this issue, but given the results of the intensive scientific research being done, it is only a matter of time before this loophole is closed.

## Who should be interested?

Business is already alarmed. Major insurance companies and reinsurers are already adding the following to their policies: „any and all direct or indirect damages caused by electro-smog pose incalculable risks and are thus excluded from coverage“.

Mobile phone makers have begun to write the following in their user manuals: „Only use or carry devices at a min. of 1 m distance from the body.“ How that's supposed to work is not described, but it does show just how scared the makers of new digital equipment are of litigation. Many cases have already been decided against these manufacturers.

(E.g. 7.2.2015, insurance policy issued by CFC Underwriting Ltd., a part of Lloyds of London)

18.11.2016

**Better protection against electro-magnetic fields**

**«The employer must assess the hazards posed by electromagnetic fields in the workplace and determine measures to ensure the health and safety of its employees.»**

The new regulation to protect workers against risks arising from electromagnetic fields (EMPA) took effect on 18 November 2016. It gives the latest EU workplace safety regulations „protect workers from physical agents“ the force of national law.

**Proof and Typical  
Problem Areas Identified  
by Science**

**What is the current status  
of the scientific evidence?**

**There's a lot of scientific evidence for four typical problem areas related to electrosmog:**

People in areas with electro-smog suffer a loss in memory capacity, their reaction time is reduced, and wrong decisions are often taken.

Cytotoxic anomalies increase massively, resulting in cell and tissue damage and disease.

Cells are under more stress. The body's system is too acidic, creating stress and pressure.

The impact of the SAR value has NOT been found to be relevant. This means that it is not the QUANTITY (watts, volts, frequency) of the current that determines the level of disturbance, but the nature of the current (incorrect frequencies = e-smog stray fields).

(Cf. the SCIgenia Forschung Wien project „The neurological & cellular effect of radiofrequency electromagnetic fields“, ATHEM-2, W. Mosgoeller, 2016)

# Converting E-Smog

## What is the direct benefit?

**If the i-like technology creates a counter-frequency to the electro-smog, many beneficial effects result. The counter-regulation of e-smog significantly reduces the typical effects scientifically proven to be negative.**

Typical improvements include:

- Improved memory performance
- Improved response times (performance, vitality)
- Correct decisions are made more often
- Health is indirectly promoted
- Stress is reduced, creating better performance and better teamwork

## Where do I need to convert e-smog?

Any place where people spent more than an hour at a time is likely to be under the influence of e-smog. Provide your employees, your family, your customers, your patients, and your visitors a bio-resonant atmosphere!

- **At home**
- **Commercial and industrial facilities of all kinds**
- **Offices (banking, insurance, accounting, etc.)**
- **Hotels and spas**
- **Restaurants**
- **Fitness centres**
- **Medical institutions, practises**
- **Shops incl. check-outs**
- **Post offices, stations, and other places with counters**
- **Car dealerships**
- **Places of education such as universities, schools, nurseries, etc.**
- **Kennels and stables**
- **Farms (livestock, grain, food)**

What are the benefits and how does the technology work?

## Technology?

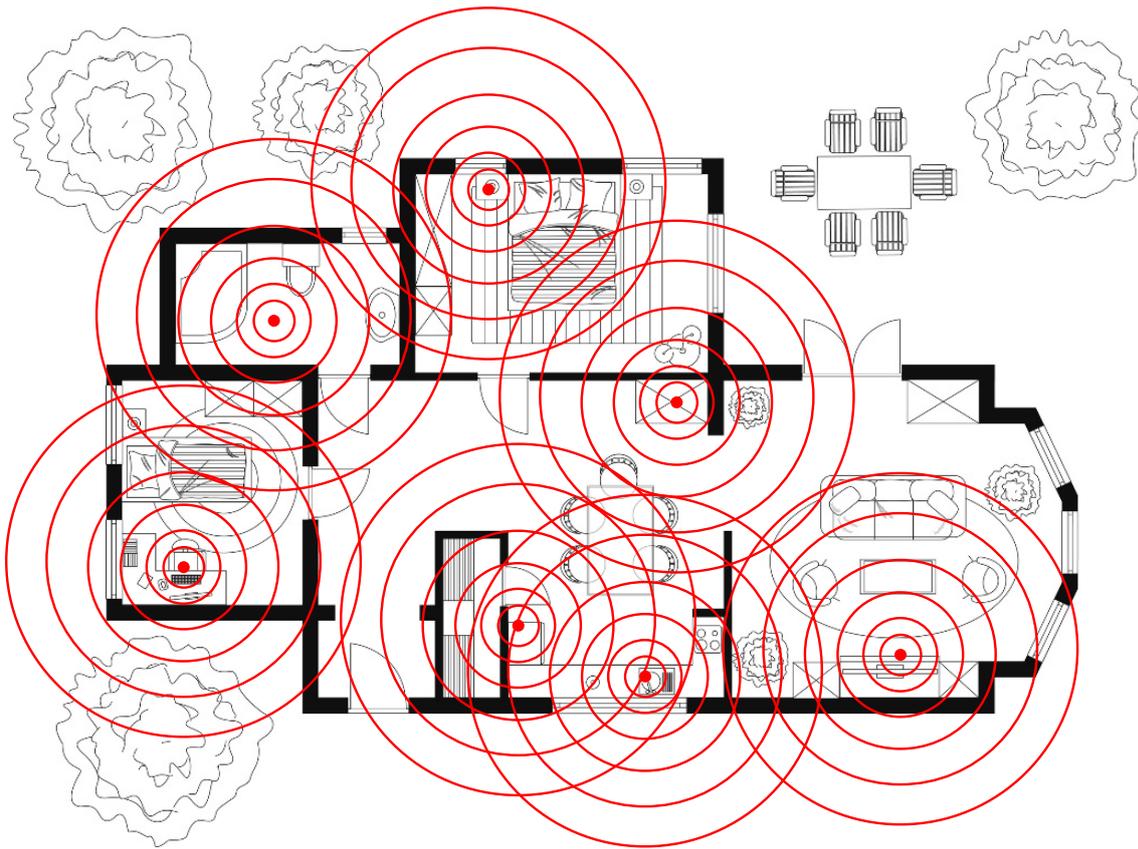

There isn't yet a standard solution for the regulation of e-smog. The scientific department of i-like Metaphysik with its scientific advisory board and extensive network of universities and research centres provides you with a solution that goes far beyond the legal minimum. The Room Converter neutralises the negative frequencies of electro-smog in rooms. The Car Converter and E-Chip let you extend that protection as you are on the go.

# Using the Room-Converters

## Use and Effect

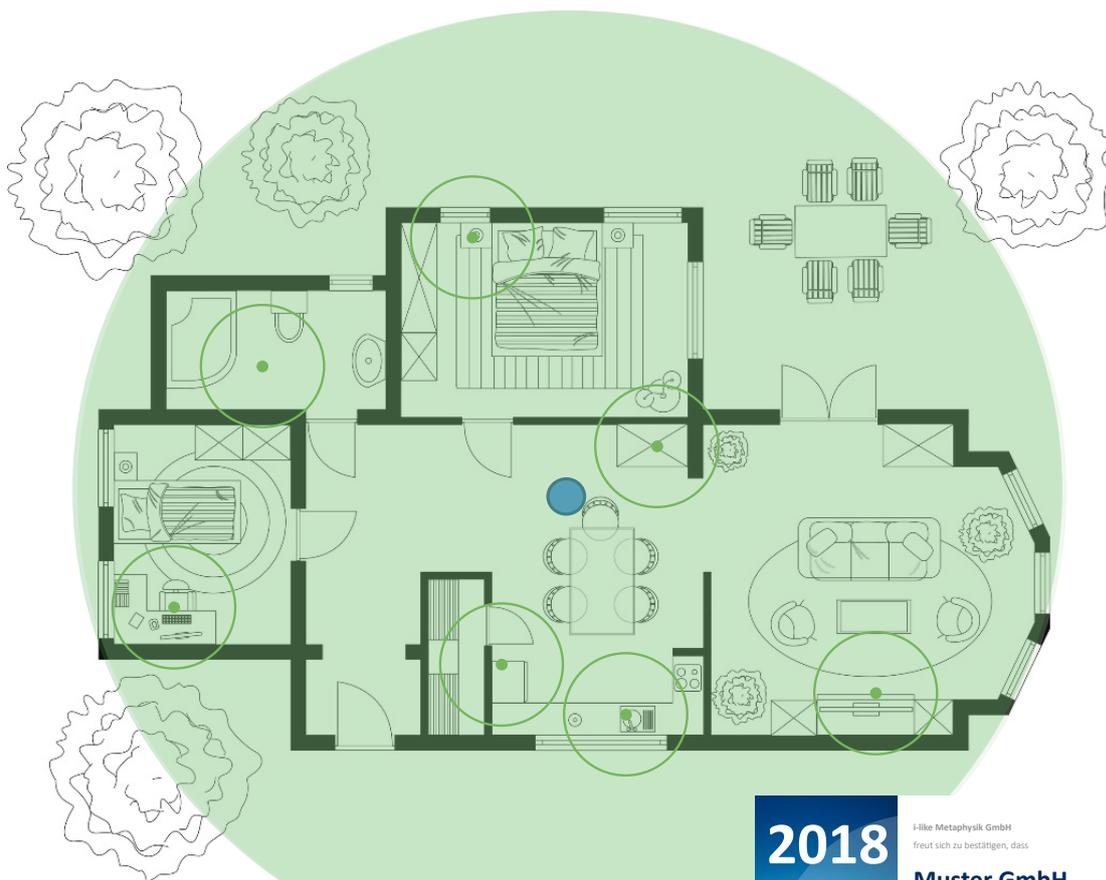

The Room Converter covers a radius of 20 metres, activating all of the devices, cables, light sources, transmitters, and any external sources of negative electro-smog into a bio-resonance frequency. The effective radius drops as the number of high-frequency devices increases. So if you have a lot of wireless devices, mobile, and digital telephones, Bluetooth devices, and LED bulbs in your space, the effective radius of the Room Converter will become smaller, even down to 10 metres.

Frequency interference from geomantic areas are corrected just like those from electromagnetic fields. Destructive interference can correct grid faults, aquifers, and other sources of interference.

## What do I need? Is there a test for it?

In addition to the instructions for the Room Converter, companies may also want to consult with trained consultants. Trained and certified i-like partners not only can help, but they are also authorised to submit information about the proposed installation to the Berlin/Lucerne Health Campus of St Elisabeth University. If approved, the company can be named a „Certified, E-Smog Bio-Resonance-Activated Company“.

# i-like: the expert in the field of electro-smog regulation

For 25 years, the i-like team has been developing and researching solutions to regulate incorrect frequencies for use in many applications. An important invention has been the ability to regulate electro-smog. Research and development has taken place in many institutions and has been conducted by professionals in many disciplines. With more than 5,000 active professional consultants, the wealth of knowledge being collected is growing day-by-day. All converters have been developed, 100% manufactured, and programmed in Switzerland.

## How it works!

Interference frequencies have been measured and analysed for many years and then programmed on magnetite crystals with technology developed in Switzerland together with experts from Russia using destructive interference. The chips and converters have not only been developed in Switzerland, but they are also 100% produced there. This guarantees the safety and long-lasting quality of all our converters.

Bio-resonance programming is used to charge room converters and other converters so that potential interference frequencies can be neutralised.

## Self-regulation and positive influence!

Existing electromagnetic waves are used to transmit information from the room converter. This corresponds to the bio-resonance principle.

All devices within the effective radius of room converter are automatically converted to sources of bio-resonance. The converters contain:

- a) pyramidal-shaped minerals for self-regulation and
- b) magnetite crystals programmed with counter frequencies to convert (vitalise) the e-smog.

## Is there any scientific evidence?

In addition to many experiences in daily use, there have been double-blind studies, test results from many applications, tests, patients, and projects. Certifications like Dr Emoto water crystals and other awards and test results clearly show the effectiveness of i-like meta-converters.

This illustration shows the person's physical condition at a health factor of 39 % before the use of the e-chip on the left side, and at a health factor of 68 % with the e-chip on the right side.
